Personal statement

Yangxu is currently a Research Assistant at the University of Oxford's Department of Social Policy and Intervention (DSPI). She holds an **MSc in Economics for Development from the University of Oxford's** Department of Economics and the Oxford Department of International Development (ODID).

Her research interests lie in **development economics** and **applied microeconomics**, with a focus on **human-capital formation** and its **returns in the labour market**. On the formation side, she is interested in how policies, interventions, and household decisions shape investments in education, health, and well-being. On the returns side, she is interested in how the human capital generated by these investments translates into subsequent labour-market outcomes, and how technological change and shifts in labour demand alter its returns. More broadly, she is interested in interaction between these two processes: how labour-market opportunities and the returns to different forms of human capital feed back into earlier investment decisions by individuals, households, and policymakers. Her current work focuses primarily on human-capital formation among children and adolescents in LMICs. Methodologically, her work draws on causal inference, econometrics, and economic evaluation to study policy-relevant questions in economics.

At Oxford, she works with the [Accelerate Research Hub](#) and collaborates with UNICEF, the Gates Foundation, and NGOs and government ministries across Africa. For example, she works closely with trial leads on a randomised controlled trial (RCT) focused on schooling and learning and leads costing analyses of scale-up scenarios for existing RCTs across Africa, helping inform NGO and government programming. She has also substantially contributed to several high-impact investment case studies, including work on ending child marriage in Ethiopia and Northern Nigeria (Gates), work on improving road safety in Tunisia (WHO), and economic evaluation of a sugar-sweetened beverage tax in Thailand (UNDP-WHO).

Outside academia, Yangxu is committed to community engagement and social impact. In China, she volunteered with the Changcheng Love Camp in her hometown for four years. She has also served as a mentor to a refugee in Burundi seeking admission to graduate study in the UK. She is expected to serve as the MIT Alumni Startups (MIT AS) Ambassador for London, helping to organise alumni events across the UK.
